

NADY TTV-2 DUAL TUBE TREMOLO VIBRATO

Two ingenious features of the fat and warm sounding TTV-2 Dual Tube Tremolo Vibrato (\$199 retail/\$159 street) are its Output control (which allows you to boost the vibrato or tremolo effects *way up* for solos) and 3-position Vibe switch (which gives you a bright natural sound on position 1, and progressively darker textures on positions 2 and 3). At low Rate settings, the TTV-2 can produce incredibly slow and throbbing effects. Sweep the knob past the 12 o' clock position, and it delivers insane amounts of modulation. The TTV-2 doubles as a wonderful noisemaker for sci-fi-style special effects, but there are a couple of potential bummers. Turning the intensity and rate knobs near full up can seriously pummel your speakers—even with your guitar muted—and the included wall-wart power supply (which attaches to the pedal with a heavy-duty 4-prong ring-lock connector) has a very stiff, bulky cable that may be difficult to secure on your pedalboard. —Mark Watson
